DETAILED ACTION

1. This is the first Office Action on the merits of Application No. 10/031,862 filed on 8/26/03. Claims 1-11 are currently pending.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 1-11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

- Claim 1 recites the limitation "the gear transmitting power" in line 6. There is insufficient antecedent basis for this limitation in the claim.
- Claim 7 recites the limitation "the gear transmitting power" in line 6. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 3681

5. Claims 1 and 7 are rejected under 35 U.S.C. 102(b) as being anticipated by Yano et al (US 5,161,503).

Yano et al disclose an engine ignition controller that would perform a method comprising the steps of: identifying a gear transmitting power generation from the engine (i.e., engine output, see Figs. 5 and 6, and col. 6, lines 6-57), measuring a speed of operation for the engine (engine speed N), and generating timing parameter for ignition for each of cylinders of the engine (see col. 5, lines 51-65).

6. Claims 1-3 and 7-8 are rejected under 35 U.S.C. 102(b) as being anticipated by Abe (US 4,924,832).

Abe discloses a system and method for controlling an ignition timing for an internal combustion engine comprising the steps of: identifying a gear transmitting power generation from the engine (i.e., vehicle speed detected by sensor 20), measuring a speed of operation for the engine (engine speed N), generating timing parameter for ignition for each of cylinders of the engine (see col. 5, lines 29-39), identifying the timing parameters using a look-up table (col. 5, lines 48-49), and measuring the rpm of the crankshaft of the engine to establish a measured rpm value (col. 5, lines 14-17).

Allowable Subject Matter

7. Claims 4-6 and 9-11 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Art Unit: 3681

Cited Prior Art

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure: Kubota et al'022, Russell'347, Yamashita et al'218, Sugano et al'944, and Makabe et al'627 which each shows a control system for controlling ignition timing for internal combustion engine.

Communication

9. Submission of your response by facsimile transmission is encouraged. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 872-9326 for regular communications and (703) 872-9327 for After Final communications. Recognizing the fact that reducing cycle time in the processing and examination of patent applications will effectively increase a patent's term, it is to your benefit to submit responses by facsimile transmission whenever permissible. Such submission will place the response directly in our examining group's hands and will eliminate Post Office processing and delivery time as well as the PTO's mail room processing and delivery time. For a complete list of correspondence not permitted by facsimile transmission, see M.P.E.P. 502.01. In general, most responses and/or amendments not requiring a fee, as well as those requiring a fee but charging such fee to a deposit account, can be submitted by facsimile transmission. Responses requiring a fee which applicant is paying by check should not be submitting by facsimile transmission separately from the check. Responses submitted by facsimile transmission should include a Certificate of Transmission (M.P.E.P. 512). The following is an example of the format the certification might take:

I hereby certify that this correspondence is being facsimile transmitted to
the Patent and Trademark Office on _____

(Date)

Typed or printed name of person signing this certificate:

(Signature)

If your response is submitted by facsimile transmission, you are hereby reminded that the original should be retained as evidence of authenticity (37 CFR 1.4 and M.P.E.P. 502.02). Please do not separately mail the original or another copy unless required by the Patent and Trademark Office. Submission of the original response or a follow-up copy of the response after your response has been transmitted by facsimile will only cause further unnecessary delays in the

Art Unit: 3681

processing of your application; duplicate responses where fees are charged to a deposit account may result in those fees being charged twice.
